

Name	Minal Joshi
Branch	CSEDS
Role	Associate consultant
Company	Oracle financial software solutions

Aptitude Test:(95 mins)

The aptitude test had two DSA problems and 32 MCQs covering topics like Operating Systems, Computer Networks, and REST APIs. There were also a few general aptitude questions. Both DSA problems were array-based and could be solved with a medium-level understanding of typical LeetCode questions.

48 students were shortlisted after the OA.

Technical Round 1:(35-45 mins)

The round started on a light note, with the interviewer asking if I had lunch since my slot was right after the lunch break. He then moved on to my internship experience and asked detailed questions about the projects I had worked on. Since one of my projects involved Spring Boot, he focused quite a bit on that topic. I was also asked to rate myself in Java. The first DSA question was based on HashMap, which I was able to solve successfully. After that, I was given a SQL query involving joins, where I had to find the manager with the highest salary. Two more DSA questions followed, but they were simpler than the first one. The round wrapped up with a discussion on what a typical day looks like for an Associate Consultant.

Technical Round 2:(30 mins)

This round focused entirely on my resume and included questions on Object-Oriented Programming concepts such as abstraction vs interfaces and the core pillars of OOPS. I was also given a scenario-based question, where staying updated with trending technologies proved to be the key to answering effectively. Several concepts were picked directly from my resume, so it's important to have a strong grasp of everything you've mentioned in it.

HR Round(10 mins):

I was asked about my nationality, how I like to spend my free time, and my willingness to relocate. The interviewer also questioned why I chose not to pursue a master's degree despite having a strong CGPA.

Verdict:Selected
